

**Master 2 internship project
Year 2019-2020**

Laboratory/ Institute: IBS
Team: Channels

Director: Winfried Weissenhorn
Head of team: Michel Vivaudou

Name and status of scientist in charge of the project: Michel Vivaudou HDR yes no

Address: IBS/Channels, 71 Avenue des Martyrs, CS 10090, 38044 Grenoble

Phone: 04 57 42 85 85

email : vivaudou@ibs.fr

Program of the Master's degree in Biology:

- Immunology, Microbiology, Infectious Diseases Integrative Structural Biology
 Physiology, Epigenetics, Differentiation, Cancer Neurosciences and Neurobiology
 Planta International

Title of project: Novel regulation of potassium channels by opioid receptors

Objectives

The study of novel regulatory pathways linking opioid receptors and G-protein activated potassium channels.

Abstract

This project concerns the mechanisms of the receptor regulation of G-protein activated potassium channels (called GIRK or Kir3 channels). These important channels are activated by the G-proteins released by G-Protein Coupled Receptors (GPCR) upon binding of their ligands. We have discovered that opioid GPCRs can modulate these channels by two pathways, the classical G-protein dependent pathway and a new pathway independent of G-proteins. Our results suggest that distinct signalling modes may be associated with distinct homomerization states of the receptors. The goal of the project will be to understand the molecular basis of this novel regulation using advanced biophysical and protein engineering techniques. The work will be conducted in close collaboration with a third year PhD student.

Methods

Protein engineering (modeling, mutagenesis, PCR, etc.). Heterologous expression and functional characterization by electrophysiological techniques using manual and robotic devices (patch-clamp, microelectrodes).
